

Abstract of the Disclosure

A polymeric, surgical clip having first and second curved leg members joined at their proximal end by a hinge portion and movable from an open position to a closed position for securing and maintaining a desired amount of
5 tension on a suture. A ridge protrudes from a portion of the inner surface of one leg and a groove is formed in a corresponding portion of the inner surface of the other leg. An eyelet extends through the ridge to engage a portion of a suture.
